

Q1. When it comes to Azure services in private preview, would all Azure customers be able to use the service?

Yes

No

Q2. Your company is planning on setting up multiple subscriptions. These subscriptions are being used by multiple departments within the company. Would the company be able to use one Microsoft account to manage the multiple subscriptions?

Yes

No

Q3. Your company is planning on setting up multiple subscriptions. These subscriptions are being used by multiple departments within the company. Would the company be able to merge the subscriptions at a later point in time?

Yes

No

Q4. Your company is planning on setting up multiple subscriptions. These subscriptions are being used by multiple departments within the company. Can each subscription have multiple account administrators?

Yes

No

Q5. Your company is planning on setting up multiple subscriptions. These subscriptions are being used by multiple departments within the company. Can a resource group contain multiple Azure subscriptions?

Yes

No

Q6. Your company is planning on setting up multiple Azure resources as part of their Azure subscription. The company wants to ensure the highest SLA possible for the deployed Azure resources. Can they accomplish this by deploying resources to multiple regions?

Yes

No

Q7. Your company is planning on setting up multiple Azure resources as part of their Azure subscription. The company wants to ensure the highest SLA possible for the deployed Azure resources. Can they accomplish this by setting up multiple subscriptions?

Yes

No

Q8. Your company is planning on setting up multiple Azure resources as part of their Azure subscription. The company wants to ensure the highest SLA possible for the deployed Azure

resources. Which of the following is guaranteed by Microsoft when it comes to the SLA defined for the various Azure services?

Performance

Security

Uptime

Bandwidth

Q9. Your company currently has a set of Azure virtual machines deployed to a subscription named Subscription A. Can they move the Azure virtual machines to a different subscription named Subscription B?

Yes

No

Q10. A company currently has an Azure subscription and an Azure AD tenant. They have users and groups defined in the Azure AD tenant. They also have virtual machines deployed to the Azure subscription. They are looking at ways on reducing costs for their overall Azure environment. Would the deletion of Azure AD users help to reduce costs?

Yes

No

Q11. Your company wants to deploy a set of Azure Web Apps as part of their Azure subscription. Which of the following URL must be used to manage the Azure Web Apps?

<https://microsoft.com>

<https://office.com>

<https://admin.azure.com>

<https://portal.azure.com>

Q12. Which of the following service within Azure storage accounts is normally used for storing data disks for an Azure virtual machine?

Blob

File

Queue

Table

Q13. Your company wants to deploy a set of Azure virtual machines as part of their Azure subscription. They want to ensure that the machines are delegated with the same set of permissions. Which of the following must be done to ensure this requirement is met?

Deploy the machines to the same resource group

Deploy the machines to the same region

Deploy the machines to the same available set

Deploy the machines to the same availability zone

Q14. Your company is planning on using the Azure Information Protection service. Can the service be used to encrypt data stored in documents?

Yes

No

Q15. Your company is planning on using the Azure Information Protection service. Can the service be used to encrypt data stored in Azure SQL databases?

Yes

No

Q16. Your company wants to deploy a set of resources as part of their Azure subscription. They want the resources to only be deployed to the East US location. Which of the following can help meet this requirement?

Azure resource lock

Azure policy

Azure advisor

Azure monitor

Q17. Your company is planning on deploying a set of Azure virtual machines. An application is going to be hosted on the set of virtual machines. They want to ensure the following requirement is met

“Users must be able to access the application quickly from the Internet” Which of the following term best describes the above requirement?

Fault tolerance

Scalability

Disaster recovery

Low latency

Q18. Your company is planning on deploying a set of Azure virtual machines. An application is going to be hosted on the set of virtual machines. They want to ensure the following requirement is met

“The application infrastructure needs to perform as per expectations even when the demand increases” Which of the following term best describes the above requirement?

Fault tolerance

Scalability

Disaster recovery

Low latency

Q19. Your company is planning on deploying a set of Azure virtual machines. An application is going to be hosted on the set of virtual machines. They want to ensure the following requirement is met “The application infrastructure must be available even in the event of a failure” Which of the following term best describes the above requirement?

Fault tolerance

Scalability

Disaster recovery

Low latency

Q20. You’re planning on using an Azure Free account. Do you only get access to a subset of services when using the Azure Free account?

Yes

No

Q21. You’re planning on using an Azure Free account. Can you create multiple Azure Free accounts with use of the same Microsoft account

Yes

No

Q22. Your company is planning on using Azure Active Directory. They have setup an Azure AD tenant. Does Azure have the ability to both authenticate and authorize to use Azure resources?

Yes

No

Q23. Your company is planning on using Azure Active Directory. Can you provide access to Azure resources only to identities stored within Azure Active Directory

Yes

No

Q24. Your company is planning on deploying a set of web applications with the use of Azure-based resources. They want to secure the web applications from Internet-based attacks. They also want to get reports on details of attacks when they occur. Which of the following can be used for this requirement?

Azure DDoS protection

Azure network security group

Azure application security group

Azure advisor

Q25. Your company is planning on deploying a set of Azure virtual machines across Availability Zones. Which of the following does Azure Availability Zones help to protect against?

Storage failure

Azure region failure

Azure data center failure

Q26. Your company is planning on deploying two Azure virtual machines named appvm and demovm. You have to ensure that appvm can't connect to demovm. Which of the following can be done to ensure that the virtual machines cannot connect to each other?

Deploy the virtual machines to different resources group

Deploy the virtual machines to different azure virtual networks

Deploy appvm based on windows server and demovm based on Ubuntu linux

Q27. Which of the following is a resource that is required by Azure Cloud Shell?

Azure virtual machines

Azure storage accounts

Azure SQL database

Q28. A company is evaluating the cost of hosting applications on the Azure platform. They are currently evaluating data transfer costs from their on-premises infrastructure to Azure. Is there a charge for Data Transfer into Azure Data Centers?

Yes

No

Q29. A company is planning on hosting an application on a set of virtual machines. The application needs to run 24*7 on the virtual machines and aim for the highest possible SLA. The company is looking for ways to reduce the costs associated with hosting the application. Would the use of Reserved virtual machines help to reduce the costs?

Installation of the solution

Configuration of the solution

Disaster recovery of the solution

High availability of the solution

Q30. Your company currently has servers in their on-premises data center. They want to decommission their data center. Which of the following must they do before they can accomplish their goal?

Establish a hybrid cloud architecture

Establish a private cloud architecture

Establish a public cloud architecture

Q31. A company is planning on using Azure Cloud services. Which of the following are benefits of using Azure Cloud services? Choose 2 answers from the options given below?

You get dedicated hardware that can be deployed at any point in time

You get a certain amount of storage that be deployed for your application.

You get a pay-as-you-go pricing when it comes to using the cloud services

You can perform self service management for the deployment of resources

Q32. Your company is planning on using the Azure Web App service. They are going to be migrating an existing web application from their on-premises data center to the Azure Web App service instance. Which of the following must they consider in this implementation?

They would need to pay for the data that is transferred from their existing web application to the azure web app

They need to ensure that there is a hard limit imposed on the number of connections allows to the web app

They would need to consider paying a monthly cost for hosting the web application on azure

They would need to pay an upfront cost for the infrastructure to host the web application

Q33. Your company currently has an Azure subscription. The IT administrator needs to run a PowerShell script that will be used to create a set of Azure virtual machines. Can they run the script on a Linux-based machine that has PowerShell installed?

Yes

No

Q34. Your company currently has an Azure subscription. The IT administrator needs to run a PowerShell script that will be used to create a set of Azure virtual machines. Can they run the script on a Linux-based machine that has Azure CLI installed?

Yes

No

Q35. Your company currently has an Azure subscription. The IT administrator needs to run a PowerShell script that will be used to create a set of Azure virtual machines. Can they run the script on a Linux-based machine that make uses of Azure Cloud Shell?

Yes

No

Q36. Your company has a set of Azure virtual machines and a set of Azure virtual networks. They want to have the ability to restrict the inbound traffic to the Azure virtual networks. Which of the following can be used for this requirement?

Azure load balancers

Azure firewall

Azure network security groups

Azure application security groups

Q37. Your company wants to use the various services Azure has to offer. Which of the following can be used for the below requirement? "Be able to provide cost recommendations for an Azure environment"

Azure devops

Azure functions

Azure application insights

Azure advisor

Q38. Your company wants to use the various services Azure has to offer. Which of the following can be used for the below requirement? "Be able to provide a monitoring solution for web applications"

Azure devops

Azure functions

Azure application insights

Azure advisor

Q39. Your company wants to use the various services Azure has to offer. Which of the following can be used for the below requirement? "Provide a solution for management of code and for continuous integration of applications"

Azure devops

Azure functions

Azure application insights

Azure advisor

Q40. Your company wants to use the various services Azure has to offer. Which of the following can be used for the below requirement? "Provide a serverless service for hosting code"

Azure devops

Azure functions

Azure application insights

Azure advisor

Q41. Which of the following service allows you to map a drive to storage from a Windows 10 machine?

Azure storage account blob service

Azure storage account file service

Azure cosmos db

Azure SQL database

Q42. Which of the following is the ideal database service that can be used for storing JSON-based documents?

Azure storage account blob service

Azure storage account file service

Azure cosmos db

Azure SQL database

Q43. Your company is planning on making use of the Azure Advisor service. Can they use the Azure Advisor service to get recommendations on how to make their Azure AD environment more secure?

Yes

No

Q44. Which of the following provides a management layer for creating, updating, and deleting resources in your Azure account? It also helps in implementing consistency across your Azure environment.

Azure resource group

Azure policies

Azure resource manager

Azure management groups

Q45. Your company wants to use the various services Azure has to offer. Which of the following can be used for the below requirement? "Be able to host a web application on the Azure platform"

Azure databricks

Azure app service

Azure iot hub

Azure ai bot

Q46. Your company wants to use the various services Azure has to offer. Which of the following can be used for the below requirement? "Provide a platform to consume messages from millions of sensors "

Azure databricks

Azure app service

Azure iot hub

Azure ai bot

Q47. Your company wants to use the various services Azure has to offer. Which of the following can be used for the below requirement? "Provide an analytics service that can be used for the purposes of machine learning "

Azure databricks

Azure app service

Azure iot hub

Azure ai bot

Q48. Your company wants to use the various services Azure has to offer. Which of the following can be used for the below requirement? "Provide a service that can help build an online digital assistant"

Azure databricks

Azure app service

Azure iot hub

Azure ai bot

Q49. Your company needs to deploy an application on a set of virtual machines. You must ensure that the deployed solution provides an SLA of 99.99%. What is the minimum number of virtual machines that need to be deployed for this requirement

1

2

3

4

Q50. Your company is planning on setting up Azure Multi-Factor Authentication. Is it possible to setup Azure Multi-Factor Authentication for non-administrative accounts?

Yes

No

Q51. Which of the following is a dedicated public cloud offering for state agencies in the United States?

International organization for standardization

General data protection regulation

National institute of standards and technology

Azure government

Q52. Which of the following is responsible for defining international standards across industries?

International organization for standardization

General data protection regulation

National institute of standards and technology

Azure government

Q53. When it comes to Azure services in public preview, would all Azure customers be able to use the service?

Yes

No

Q54. Your company is planning on using Azure Resource Manager templates to deploy resources as part of their Azure subscription. Which of the following type should the template file be created as?

C#

JSON

Java

CSV

Q55. Which of the following operating systems are supported when it comes to Azure Virtual Desktop? Choose 2 answers from the options given below

Windows 10

Windows 11

Ubuntu server

MacOS

Q56. Can you use Azure Virtual Desktop for desktop virtualization?

Yes

No

Q57. Your company has just setup an Azure account. For a certain set of users, they want to ensure additional layers of security are added to identify the user. Which of the following can be used for this requirement

Role based access control

Multi factor authentication

Resource groups

Subscriptions.

All options are correct

Q58. Which of the following can be used to understand the security and compliance adopted by Microsoft when it comes to their products?

Microsoft defender for cloud

Microsoft trust center

Azure advisor

Azure monitor

Q59. Your company is planning on making use of Azure Blueprints. Can you add Azure Resource Manager templates to an Azure Blueprint

Yes

No

Q60. Your team is planning on using Azure Cloud Shell to manage resources as part of an Azure subscription. Do they need to install any tool to make use of Azure Cloud shell?

Yes

No

Q61. Can you use Azure PowerShell on a macOS device?

Yes

No

Q62. Your company is planning on setting up an Azure virtual machine scale set resource as part of their Azure subscription. Can the machines in the scale set scale up automatically based on demand?

Yes

No

Q63. Your company is planning on setting up an Azure virtual machine scale set resource as part of their Azure subscription. Can the machines in the scale set scale down automatically based on demand?

Yes

No

Q64. Your company is planning on setting up resources as part of their Azure subscription. For which of the following would the company need to take care of when it comes to software patches and updates?

Azure virtual machines

Azure active directory

Azure functions

Azure SQL database

Q65. Your company has an Azure virtual machine and an Azure storage account located in the East US location. An application hosted on the Azure virtual machines interacts with the Azure storage account. You have to ensure the traffic between the Azure virtual machine and the Azure storage account is not routed via the Internet. Which of the following can be used for this requirement

Virtual network peering

Service endpoints

Application security groups

Resource groups

Q66. Your company is planning on using Azure Resource Manager templates. Can you make use of a single ARM template to deploy multiple resources to Azure?

Yes

No

Q67. Your company is planning on using Azure Resource Manager templates. Can you deploy the templates via the Azure Portal

Yes

No

Q68. Which of the following service can be used to deploy a file share to Azure?

Azure active directory

Azure SQL database

Azure cosmos db

Azure storage account

Q69. Which of the following service can be used to quickly convert a Windows Server into a quick cache of Azure file shares?

Azure file sync

Azure functions

Azure storage accounts

Azure virtual machines

Q70. Your company has setup an Azure subscription and an Azure AD tenant. They are going to be deploying resource across resource groups in the Azure subscription. Would they be able to use Azure Cost Management to see costs associated with the resource groups?

Yes

No

Q71. Which of the following redundancy option is possible with storage accounts based on Premium block blobs?

Locally redundant storage

Geo redundant storage

Read access geo redundant storage
